
a
Paper-cluster bootstrap, 10,000 resamples of the 50 papers
inert-limited loop: 50/81 (61.7 %), 95 % CI 48.9–72.2 %
no limit: 25/81 (30.9 %), 95 % CI 16.9–44.6 %
observed share and 95 % CI
bootstrap resamples
comparisons whose STY leader is not the plant-cost leader (%)
b
Size of the disagreements
inert-limited loop (primary)
no limit
mismatched comparisons

labels: comparisons (papers)
regret at least (%)
c
Measurement resampling
mismatched, inert-limited loop (primary)
mismatched, no limit
noise floor (STY leader changes)
error ×1
error ×2
error ×4
observed 25
observed 50
comparisons (of 81), mean and
95 % range over 2,000 draws
d
Persistence of each observed disagreement
inert-limited loop:
42 of 50 in ≥ 90 %
▼ near-infeasible: 26
no limit:
16 of 25 in ≥ 90 %
draws still mismatched at error ×1 (%)
observed disagreements, sorted by persistence
e
Every robustness check in both loops
inert-limited loop (primary)
no limit
cost gap > 5 %
STY leader ≠ plant-cost leader (%)
