
a
Paper-cluster bootstrap, 10,000 resamples of the 28 papers
inert-limited loop: 28/40 (70.0 %), 95 % CI 54.1–82.8 %
no limit: 15/40 (37.5 %), 95 % CI 15.2–57.1 %
observed share and 95 % CI
bootstrap resamples
comparisons whose STY leader is not the plant-cost leader (%)
b
Size of the disagreements
inert-limited loop (primary)
no limit
mismatched comparisons
regret at least (%)
labels: comparisons (papers)
c
Measurement resampling
mismatched, inert-limited loop (primary)
mismatched, no limit
noise floor (STY leader changes)
error ×1
error ×2
error ×4
observed 15
observed 28
comparisons (of 40), mean and 95 % range over 2,000 draws
d
Persistence of each observed disagreement
inert-limited loop: 24 of 28 in ≥ 90 % ▼ near-infeasible: 11
no limit: 11 of 15 in ≥ 90 %
draws still mismatched at error ×1 (%)
observed disagreements, sorted by persistence
e
Every robustness check in both loops
inert-limited loop (primary)
no limit
cost gap > 5 %
STY leader ≠ plant-cost leader (%)
as published
without the study with most comparisons
plot-read entries added
products close to MeOH, CO, CH4
unreported split: all CO
unreported split: all CH4
recycled CO as inert
catalyst priced from composition
more catalyst, conversion raised
