Laboratory catalyst leaders are often not the plant-level optimum: main figures 1–6

Each figure is the same vector artwork as its own SVG and PDF; figures are scaled individually on this sheet only.

Figure 1 The most active ammonia catalyst is not the cheapest to run

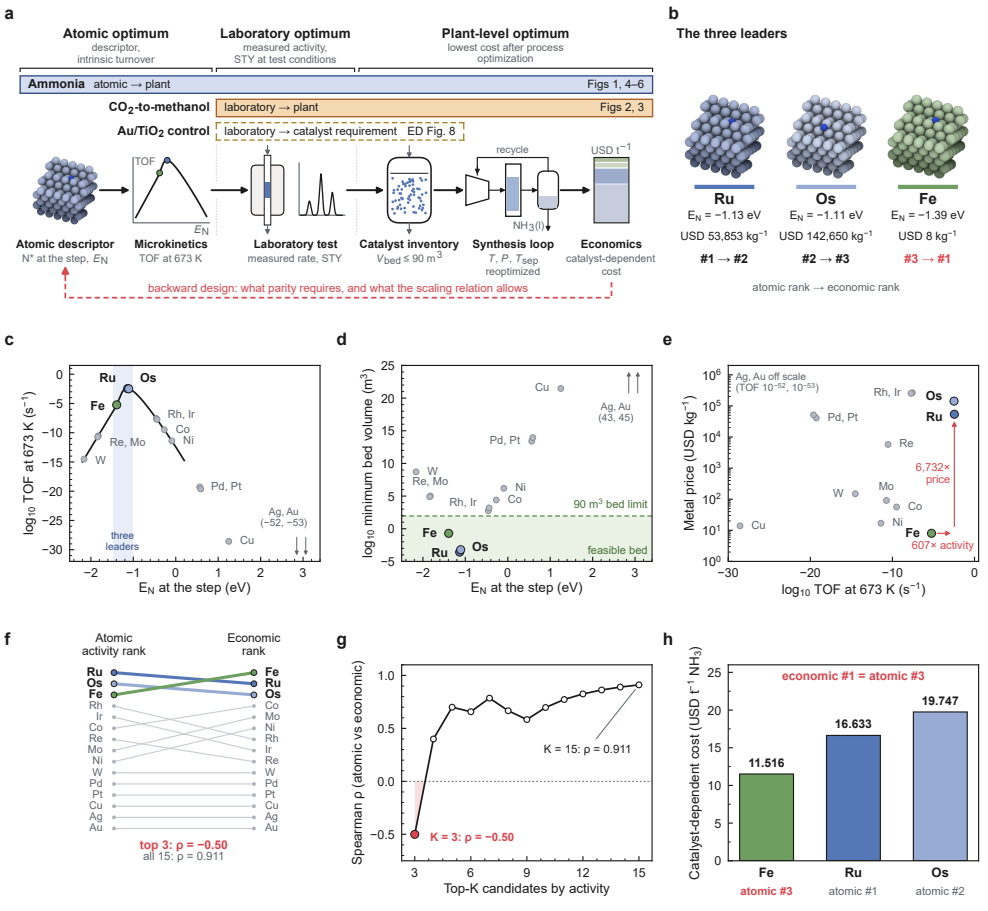

Figure 2 Laboratory leaders are often not the plant-cost leaders

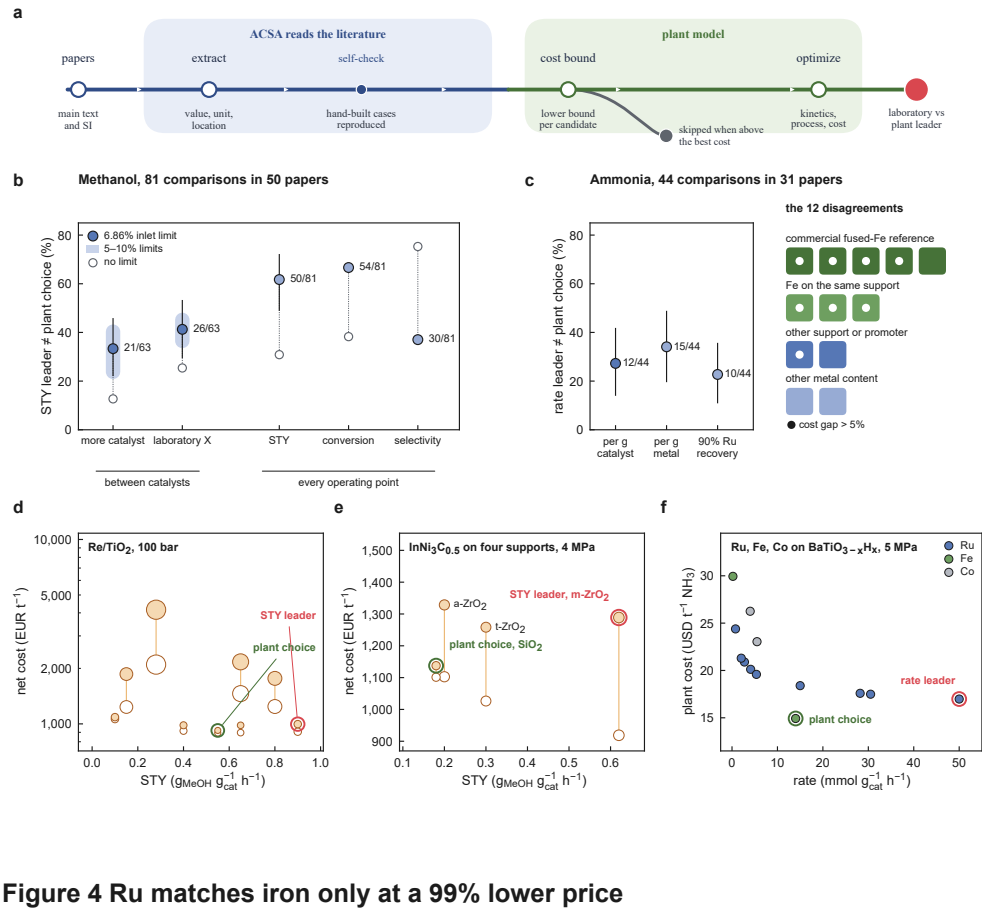

Figure 3 Selectivity, recycle and purge reshape the methanol ranking

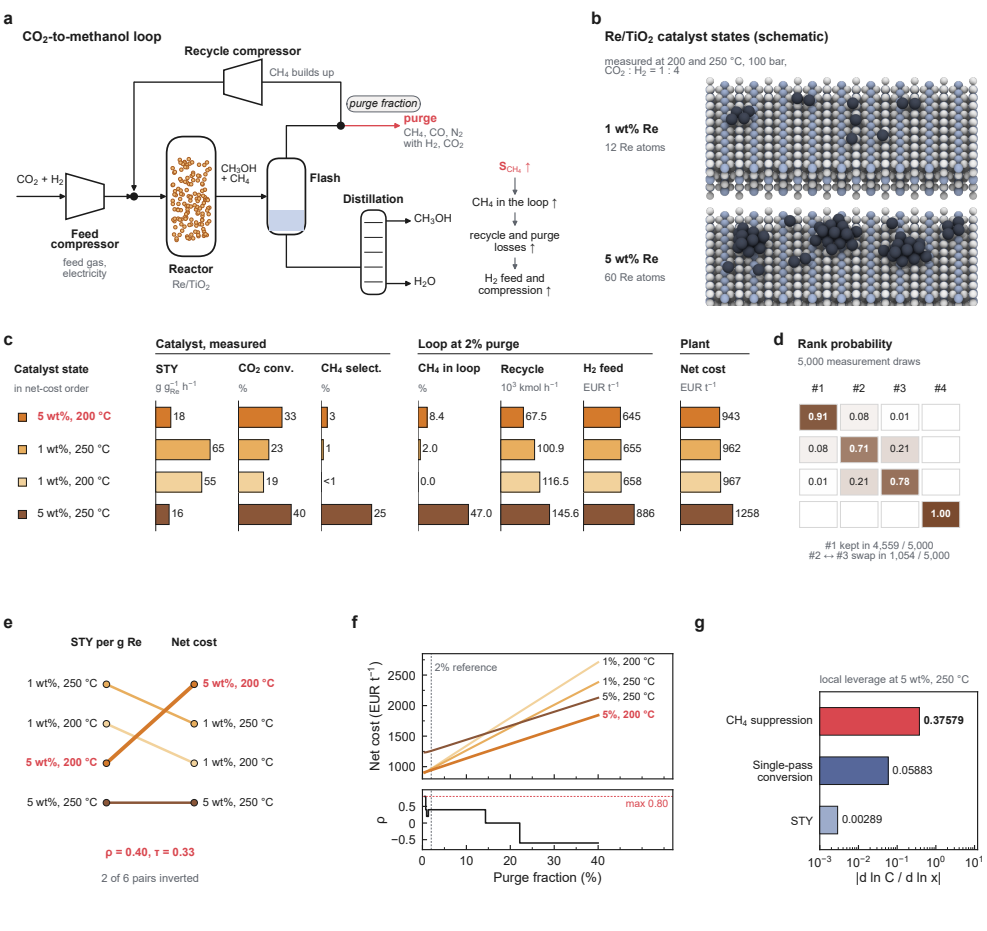

Figure 4 Ru matches iron only at a 99% lower price

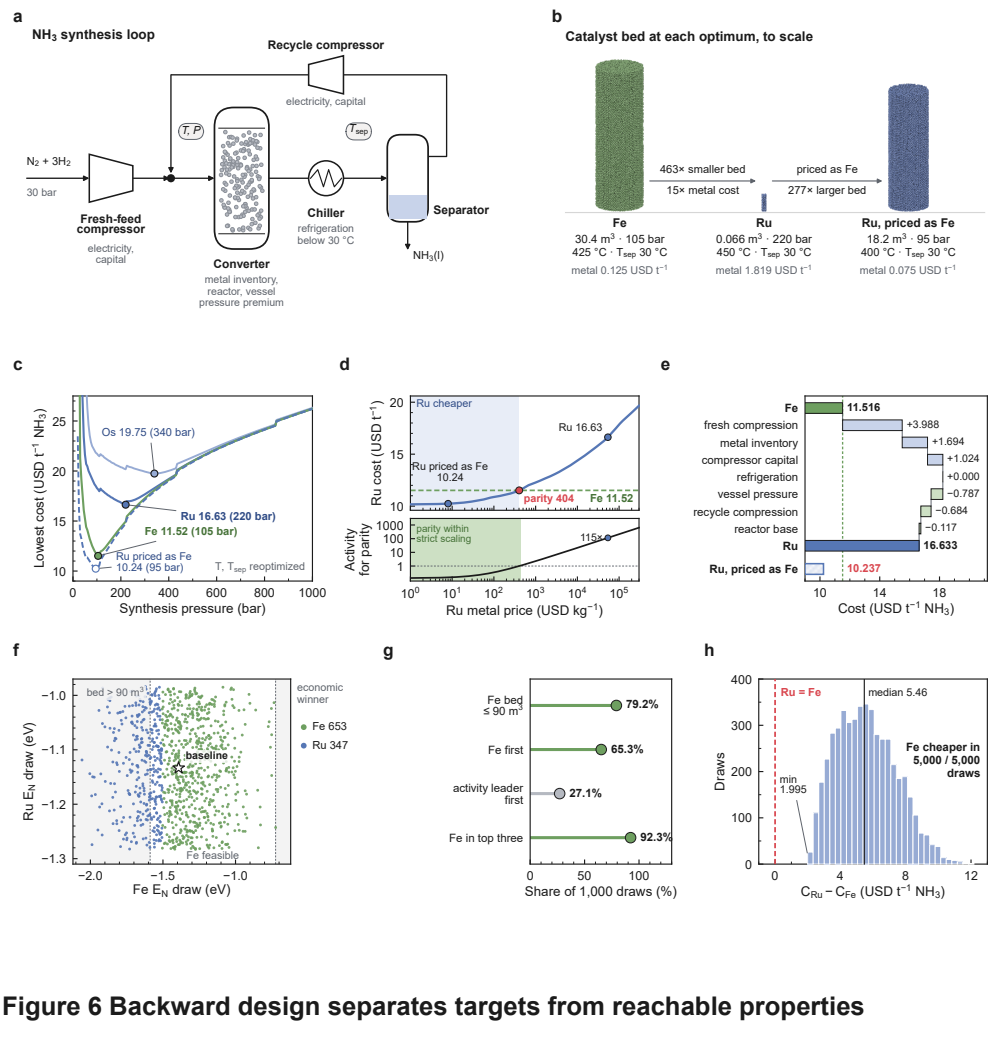

Figure 5 Supported Ru/C matches fused iron, downstream

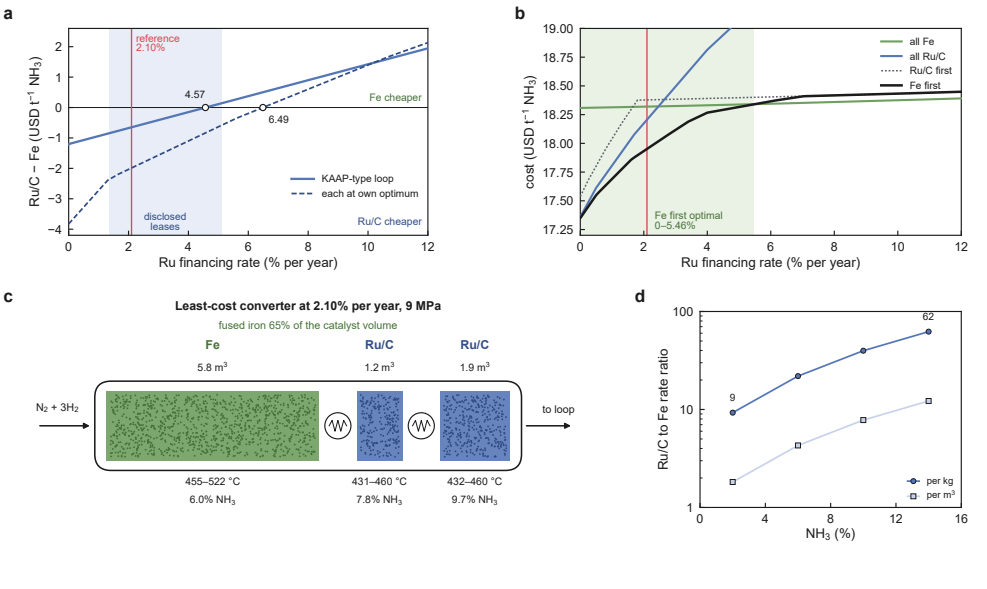

Figure 6 Backward design separates targets from reachable properties
