
a
Paper-cluster bootstrap, 10,000 resamples of the papers
observed 15/40
(37.5 %)
95 % CI
15.2–57.1 %
bootstrap resamples
comparisons whose STY leader is not the plant-cost leader (%)
b
Size of the disagreements
labels: comparisons (papers)
mismatched comparisons
15 (9)
14 (8)
13 (7)
12 (6)
8 (2)
7 (2)
6 (2)
regret at least (%)
c
Measurement resampling
mismatched comparisons
noise floor (STY leader changes)
re-measured, error x1
re-measured, error x2
re-measured, error x4
observed 15
comparisons (of 40), mean and
95 % range over 2,000 draws
d
Persistence of each observed disagreement
error ×1
11 of 15 stay in ≥ 90 % of draws
draws still mismatched (%)
observed mismatched comparison (sorted)
e
Inlet-composition limit of the loop
published CO2-to-methanol
reactor inlets (4 designs)
all comparisons
isothermal catalyst comparisons
workbook limit 6.86 % (sensitivity): 28/40 (70 %); isothermal 29/62 (47 %)
STY leader ≠ plant-cost leader (%)
limit on the reactor-inlet content of species other than H2 and CO2 (mol%)
no limit
